Re: Variance

The purpose of this letter is to ask for a variance to construct a 26' x 24' storage building at 19 Tanglewood Drive in Bryant, Arkansas and to allow the existing storage buildings of 12' x 16' and 12' x 12' to remain.

Based on the total square footage of my home which is 2,542, the maximum building of 25% of the total square footage would be 635. The new building would be 624 square feet. The square footage currently in the two existing buildings combined is 336 square feet. The total square footage after construction would be 960 square feet. The variance I am requesting would be to allow for an additional 325 square feet on my property which is .82 acres.

Le me know if you have any questions or need additional information.

Thank you,

Sincerely,

Donald Whitfield

CERTIFICATION

I hereby state that this Final Drainage has been prepared by me or under my supervision and meets the standard of care and expertise which is usual and customary in this community of professional engineers. The analysis has been prepared utilizing procedures and practices by the City of Bryant and within the standard accepted practices.

Date: 07/10/24
REVISED: 07/11/24

PROJECT DESCRIPTION

The proposed project is for the construction of a Little Caesars Restaurant located at Reynolds Road and Brown Lane. The proposed development is for a 1,873 square foot building.

This drainage analysis is to evaluate the predevelopment & post development drainage for the 2YR, 5YR, 10YR, 25YR and 100YR storms. The existing site is grass covered. The developed condition will be covered in approximately 70% impermeable surfaces.

PROPOSED DRAINAGE SYSTEM

The developed site will drain by overland flow to a detention basin on the west side of the site. The detention basin will have a 8" diameter outlet pipe and a 5 foot wide overflow wier. The pre-development and post-development flows are summarized below:

STORM	PRE-DEVELOPMENT	POST-DEVELOPMENT
2	1.10	1.97
5	1.35	2.11
10	1.49	2.22
25	1.71	2.77
100	2.13	3.65

Due to the 8" minimum size of the outlet pipe, the post-development flows are more than the pre-development.

Re: Variance

The purpose of this letter is to ask for a variance to construct a 26' x 24' storage building at 19 Tanglewood Drive in Bryant, Arkansas and to allow the existing storage buildings of 12' x 16' and 12' x 12' to remain.

Based on the total square footage of my home which is 2,542, the maximum building of 25% of the total square footage would be 635. The new building would be 624 square feet. The square footage currently in the two existing buildings combined is 336 square feet. The total square footage after construction would be 960 square feet. The variance I am requesting would be to allow for an additional 325 square feet on my property which is .82 acres.

Le me know if you have any questions or need additional information.

Thank you,

Sincerely,

Donald Whitfield

DETENTION POND MAINTENANCE PLAN

Background
The detention pond is located just beyond the rear boundary of the 4 parcels containing the proposed housing units. The modifications are designed to temporarily detain stormwater to meet the City of Bryant's water quantity criteria before discharging from the pond.

Routine Maintenance
Routine maintenance will include but not be limited to:
-The primary discharge pipe from the pond and other areas will be inspected monthly for debris which could inhibit the proper flow of discharge. Any debris will be removed immediately and disposed of or placed in a location to prevent future maintenance and to not cause impact up or downstream of the structure.
-Trash will be removed from around the pond to prevent entering the pond. Generally, the site should be kept free of loose trash which could be carried off site by wind or rain.
-Inspect the pond and discharge pipe for non-routine maintenance need.

Periodic or Non-Routine Maintenance
The routine inspection of the pond area and discharge weir will identify needed repairs and non-routine maintenance. These items may include but not be limited to:
-Bottom of pond will be sodded (except where trickle channel is located).
-Embankments sloped 2:1 will be rip rapped, 3:1 slopes shall be sodded
-Re-growth of trees on or around the pond bank. These should be cut and removed from the pond area.
-Stabilization of slopes may be required periodically or after excessive rain events. Any disturbance of slopes should be reseeded or may require installation of erosion control materials until seeding can reestablish adequate grasses to prevent future erosion.
-Any other maintenance or repairs which would minimize other maintenance to the pond or outfall structures.

For questions or concerns about the pond, contact ___ at 501-315-2626.

RE: Request for Modification from Code and Request for CUP (Parcel #:840-12022-000)

Dear Mr. Leonard,

I am requesting a modification from the Walk Bike Drive Code for no curb improvements on this proposed development. We are proposing duplexes on this property and the majority of the property will be driveways. Adding curb to this development would be only in between driveways which would be minimal on this project.

It is our goal to be included on the August 12, 2024 Planning Commission agenda.

Please feel free to contact me with any questions or concerns or if I can be of any further assistance.
Sincerely,

Jonathan Hope

Summary

The following calculations pertain to the detention design for the proposed multi family development Located off Hurricane Lake Road in Bryant, AR.

Proposed Development area = 0.92 Acres

	C	*tc (min)*
Pre-development:	0.49	23
Post-development:	0.69	23

Detention Pre & Post Development Comparisons

Prior to detention routing:

Event (yrs)	Pre-developed Flow Q (cfs)	Post-developed Flow (no pond) Q (cfs)
2	1.40	1.98
10	1.95	2.75
25	2.26	3.18
50	2.57	3.61
100	2.75	3.87

After routing to detention:

Event (yrs)	Pre-developed Q (cfs)	Post-developed (with pond) Q (cfs)	Water El. (ft)
2	1.40	1.39	402.25
10	1.95	1.72	402.62
25	2.26	1.89	402.85
50	2.57	2.03	403.05
100	2.75	2.16	403.13

Therefore the development will not create any additional flow in the downstream area.

East Channel

The following calculations pertain to the existing east ditch, and are based on proposed re-design and excavation of the existing channel in order to have the needed vertical room necessary for detention and 2.0 feet of freeboard for the finished floor elevations of proposed structures.

DETENTION POND MAINTENANCE PLAN

Background
The detention pond is located just beyond the rear boundary of the 4 parcels containing the proposed housing units. The modifications are designed to temporarily detain stormwater to meet the City of Bryant's water quantity criteria before discharging from the pond.

Routine Maintenance
Routine maintenance will include but not be limited to:
-The primary discharge pipe from the pond and other areas will be inspected monthly for debris which could inhibit the proper flow of discharge. Any debris will be removed immediately and disposed of or placed in a location to prevent future maintenance and to not cause impact up or downstream of the structure.
-Trash will be removed from around the pond to prevent entering the pond. Generally, the site should be kept free of loose trash which could be carried off site by wind or rain.
-Inspect the pond and discharge pipe for non-routine maintenance need.

Periodic or Non-Routine Maintenance
The routine inspection of the pond area and discharge weir will identify needed repairs and non-routine maintenance. These items may include but not be limited to:
-Bottom of pond will be sodded (except where trickle channel is located).
-Embankments sloped 2:1 will be rip rapped, 3:1 slopes shall be sodded
-Re-growth of trees on or around the pond bank. These should be cut and removed from the pond area.
-Stabilization of slopes may be required periodically or after excessive rain events. Any disturbance of slopes should be reseeded or may require installation of erosion control materials until seeding can reestablish adequate grasses to prevent future erosion.
-Any other maintenance or repairs which would minimize other maintenance to the pond or outfall structures.

For questions or concerns about the pond, contact ___ at 501-315-2626.

Summary

The following calculations pertain to the detention design for the proposed multi family development Located off Hurricane Lake Road in Bryant, AR.

Proposed Development area = 0.92 Acres

	C	*tc (min)*
Pre-development:	0.49	23
Post-development:	0.69	23

Detention Pre & Post Development Comparisons

Prior to detention routing:

Event (yrs)	Pre-developed Flow Q (cfs)	Post-developed Flow (no pond) Q (cfs)
2	1.40	1.98
10	1.95	2.75
25	2.26	3.18
50	2.57	3.61
100	2.75	3.87

After routing to detention:

Event (yrs)	Pre-developed Q (cfs)	Post-developed (with pond) Q (cfs)	Water El. (ft)
2	1.40	1.39	402.25
10	1.95	1.72	402.62
25	2.26	1.89	402.85
50	2.57	2.03	403.05
100	2.75	2.16	403.13

Therefore the development will not create any additional flow in the downstream area.

East Channel

The following calculations pertain to the existing east ditch, and are based on proposed re-design and excavation of the existing channel in order to have the needed vertical room necessary for detention and 2.0 feet of freeboard for the finished floor elevations of proposed structures.
